

APPLIED AI AND ENTERPRISE SYSTEMS

From board mandate to a measurable AI program

We take an AI mandate to a funded first use case, apply it to the ERP, finance, CRM, and supply-chain systems you already run, and govern the program so results are measurable. Enterprise needs assessments, roadmapping, and architecture, then advisory through execution under one accountable senior team.

What we do

- 01 Advisory.** Enterprise needs assessments, roadmapping, and architecture across ERP, cloud, AI, and software.
- 02 ERP selection and oversight.** Vendor-neutral selection and program oversight through go-live. No reseller incentives.
- 03 Cloud, integration, and data.** Managed AWS, Azure, and GCP. CRM, CPQ, and marketing automation. Enterprise integration, data warehouses and lakehouses, analytics.
- 04 Applied AI.** Agentic systems, ML engineering, governance aligned to ISO 42001 controls, and training that leaves working capability behind.
- 05 Software.** ERP extensions and AI productivity tools.

Why clients choose us

One accountable senior team, embedded from decision to delivery.

Vendor-neutral. No kickbacks shape a recommendation.

Outcomes in business terms: hours saved, cycle time, cost avoided, IRR, EBITDA.

Veteran-founded in 2017. Registered Partner in the Claude Partner Network.

How we deliver: DRIVER

Six phases. Every engagement, every domain.

D

Discover

Interviews, technology audit, process mapping, constraints.

R

Roadmap

Target architecture, sequenced initiatives, success metrics, decision gates.

I

Implement

Build and deliver the first funded use case.

V

Validate

Measure the first use case against its baseline.

E

Expand

Scale proven use cases across units and systems.

R

Refine

Outcomes measured against Roadmap metrics. Continuous.

Let's Architect Your Future.
